REPORT OF THE BOARD OF REGENTS 1911 - 12

University of Idaho, Office of the Regents of the University of Idaho.

Moscow, Idaho, December 3, 1912.

To His Excellency, the Governor of Idaho:

Sir:—I have the honor to present for your consideration the report of the Board of Regents of the University of Idaho for the period beginning January 1, 1911, and ending December 31, 1912.

E. H. MOFFITT, President of Board of Regents.

BOARD OF REGENTS

E. H. Moffitt, President	Wallace
Edward S. Sweet, Vice President	.Grangeville
Mrs. Samuel H. Hays, Secretary	Boise
George R. Barker	Sandpoint
D. Worth Clark	Pocatello

EXECUTIVE COMMITTEE:

E. H. Moffitt

Mrs. Samuel H. Hays

D. Worth Clark.

REPORT OF THE REGENTS

OF THE

UNIVERSITY OF IDAHO

THE BOARD OF REGENTS

The first meeting of the Regents in this biennial period was held in Moscow April 12th, 1911. The members of the Board were M. E. Lewis, Moscow, President; E. S. Sweet, Grangeville, Vice President; Mrs. S. H. Hays, Boise, Secretary; E. H. Moffitt, Wallace, and D. Worth Clark, Pocatello. Mr. Lewis resigned in June, 1911, and Mr. Moffitt was elected President of the Board in October, 1911. At the same meeting Mr. Clark was appointed a member of the executive committee, and Mr. H. Melgard, Moscow, was elected Treasurer. Mr. George R. Barker, Sandpoint, appointed by Governor Hawley to succeed Mr. Lewis, attended his first session in October, 1911. present organization and membership of the Board is as follows: Mr. E. H. Moffitt, President; Mr. E. S. Sweet, Vice President; Mrs. Samuel H. Hays, Secretary; Mr. D. Worth Clark, and Mr. George R. Barker. The executive committee consists of Mr. Moffitt, Mrs. Hays, and Mr. Clark. The total expenses of the Board of Regents, including the printing of their report, amounted to \$1184.80 for the biennial period extending from December 1, 1910, to December 1, 1912.

CHANGES IN THE FACULTY

During the years 1911 and 1912, while there have been fewer resignations from the faculty than usual during a biennium, there has been, nevertheless, a considerable number of changes, as set forth below. In several instances these were by way of additions to the College of Agriculture, necessitated by its enriched curriculum.

Lieutenant Andrew William Smith, after completing a detail of three years at the University as Professor of Military Science and Tactics and Commandant of Cadets, rejoined his regiment in February, 1911. Lieutenant Thomas Earl Cathro was appointed in his stead and served for one and one-half years. In September, 1912, Lieutenant John Francis Franklin assumed these duties.

Edwin Ebenezer Elliott, for three years Professor of Agricultural Education, resigned in 1911, and the position has not been filled.

John Fisher MacLane resigned as Professor of Law and acting dean of the College of Law to accept an appointment as district judge. His place was filled by the appointment of Otis Eddy McCutcheon, of Idaho Falls, formerly a member of the Board of Regents.

Professor Sidney Roby Sheldon, of the Department of Electrical Engineering, by an exchange with Professor Sol E. Hutton, formerly a member of the University faculty, spent the year 1910-11 upon a leave of absence at the Imperial Polytechnical College at Shanghai, China, and at the close of the year decided to remain there. The vacancy thus created was filled by the appointment of Laurence Jay Corbett, a graduate of the University of California, but formerly a student at the University of Idaho for three years. For five years preceding his appointment he had been engaged as consulting engineer in Spokane, Washington.

Lucius Franklin Childers, Professor of Agronomy, resigned to take a commercial position as manager of the Clagstone estate. The department is replaced by the Department of Soils and the Department of Field Crops and Farm Management. To the latter position Frank Leslie Kennard, a graduate of South Dakota Agricultural College, and former special agent of the Bureau of Plant Industry, was promoted from an instructorship. As Professor of Soils there was secured Dr. Peter Powell Peterson (University of Chicago), assistant professor at the University of Wisconsin.

William Reuel Chedsey, for three years Associate Professor of Mining Engineering, resigned in 1911 to go into practical work. He was replaced by Douglas Clermont Livingston who received his training at Stanford and McGill Universities, and in practical mining work in Arizona, Ontario, and Mexico.

Upon the resignation after two years' service of Dr. Carl

Cosmo Rice, Dr. Shirley Gale Patterson, instructor at the University of Chicago, was appointed Associate Professor (in charge) of Romance Languages. Dr. Patterson received his bachelor's degree at Amherst, and pursued his graduate studies at Columbia and Cornell, as well as at the Sorbonne, Paris, and the University of Madrid.

Professor Edgar Noble Durfee resigned from the Law faculty to accept a position in the University of Michigan. In his stead was appointed Dr. Lyman P. Wilson, a graduate of Knox College and the University of Chicago, and for three years city attorney of Galesburg, Illinois.

Justin Sarsfield DeLury, for five years Instructor and then Assistant Professor of Geology and Mineralogy, resigned to take up business. To the vacancy was appointed Dr. Charles Arthur Stewart as Associate Professor. He received the degrees of A.B., A.M., and Ph.D. from Columbia University, and at the time of his appointment was instructor at Cornell University.

A new position of great importance to the state was created in 1911 when Professor Walter Herbert Olin was made Director of Agricultural Extension. Professor Olin had held for six years responsible positions in Iowa State College and Colorado College of Agriculture and for three years as Industrial Commissioner of the Denver, Laramie and Northwestern Railway.

Dr. Eustace Thurman Baker, a graduate of Ohio State University, was appointed Professor of Veterinary Science, coming to the University from Washington State College.

The Chair of Botany, formerly included under the Department of Biology, was created in 1912, and Charles Edward Temple was made the incumbent. Professor Temple is a graduate of the University of Nebraska. At the time of his appointment he was Instructor in Botany at the University of Michigan.

Upon the departure of Professor Frandsen in 1911 to head the Dairy Department of the University of Nebraska, the department was divided into two, and Gustave Edward Frevert, Instructor since 1909, was promoted to be Assistant Professor of Dairy Manufactures, and Elmer Verne Ellington, Field Dairyman in cooperation with the United States Dairy Division, Department

ment of Agriculture, was advanced to be Assistant Professor of Dairy Production,

The new Chair of Agricultural Engineering and Irrigation, created in 1911, was filled by the appointment of Everett Walter Hamilton, a graduate of Iowa State College. At the time of his appointment he was serving as Assistant Professor in Iowa State College.

The work of the Department of Bacteriology increased to an extent that necessitated the employment of additional instructors. Winfred Rulison Wright, a graduate of Michigan Agricultural College, was engaged as Assistant Professor of Bacteriology; and Clifford Leslie MacArthur, M.S., University of Idaho, 1912, was appointed Instructor in Bacteriology.

James Agnew Hughes, B. S., University of Virginia, 1904, has been appointed Assistant to the Dean of Agriculture and Principal of Short Courses in Agriculture.

Clarence Cornelius Vincent, who left the University in 1911 to become head of the Department of Horticulture at Clemson College, was recalled in 1912 to be Associate Professor of Horticulture.

Mrs. Jennie L. K. Haner, for nearly four years Assistant Professor of Domestic Art and Drawing, resigned on account of poor health in March, 1912, and Miss Margaret Sweet was appointed in her stead. Miss Sweet received her training at the University of Chicago and Pratt Institute.

In June, 1912, Miss Laura Breese also resigned as Assistant Professor of Home Economics, and during the summer the department was reorganized. Miss Jessie May Hoover was secured as the first Professor of Home Economics; Miss Grace Schermerhorn as Assistant Professor, and Miss Virginia Shearer as Assistant. Professor Hoover received her preparation at Kansas State Normal, Kansas Agricultural College, Lewis Institute, and the University of Chicago, and has been head of Home Economics Departments in South Dakota State College and North Dakota Agricultural College. Miss Schermerhorn was educated at Oberlin College, Springfield Training School. and Columbia University. Miss Shearer received her special training at Pratt Institute.

Associate Professor C. C. Tull of the English Department is spending a year in Europe upon leave of absence. His work is being carried on by Benjamin Harrison Lehman, a graduate of Harvard University, who was Instructor in English during 1911-12.

The following more important promotions may be mentioned: Edward John Iddings from the principalship of the School of Practical Agriculture to be Professor of Animal Husbandry; Gustus Ludwig Larson from Associate Professor of Mechanical Engineering to a full professorship; Dr. John Anton Kostalek from Instructor in Organic Chemistry to be Assistant Professor; Mrs. Caroline Christine Isaacson from an instructorship in German to an assistant professorship; and Dr. Davis Bernard Steinman from Instructor in Civil Engineering successively to Assistant Professor and Associate Professor. Harry Proctor Fishburn and Charles William Colver, who have been connected with the Department of Agricultural Chemistry since 1909, received in 1912 the title of Assistant Professor of Agricultural Chemistry.

New instructors are: Irwin Wycliffe Cook in Forestry; Orlo Ashley Pratt in Plant Pathology; Eugene Hamilton Storer in Voice Culture, Choral Work, and Public School Music; Miss Isabel Stephens in Physical Education; Mrs. E. Hellier-Collens in Preparatory English; and Clarence Sinclair Edmundson in the School of Practical Agriculture.

ATTENDANCE

The University is beginning its twenty-first year under very favorable conditions. Some comparison of attendance with ten and twenty years ago may well be in place. Of strictly collegiate students there are (November, 1912), 375; for the years 1902-03 the number is 128; and for 1892-93, 6. Perhaps the most striking change is in the proportion of college and preparatory students. At the first opening of the doors of the institution in 1892 practically all students were of preparatory grade, and not until the thirteenth year (1904-05) did the number of college students exceed the number of preparatory students. In the past eight years, however, the growth of four-year high schools over the state has been remarkable, and as a corollary to this, the Prepar-

atory School has become less important, so that now, out of a total of 709 students enrolled, only 33 are preparatory students. Latterly this decline has been hastened by the action of the Regents in eliminating one year of the school each year, so that next year it is expected that only twelfth-grade work will be offered, and the following year none.

TABLE OF ATTENDANCE BY YEARS

1912 (to Nov. 26	5) 375	29	75	33	202	709

For the year 1912-13 to date (November 26, 1912) there are registered the following: Graduate and undergraduate students 375; Summer Session students, excluding duplicates, 197—making a total of 572 college students; special students, 29; School of Practical Agriculture, 75; preparatory students, several of whom are taking purely college work but who are, on account of the high standard of admission, rated down, 33—a total thus far of 709. To these will be added, besides the new students entering College at the opening of the second semester, students in the ten-weeks courses for Miners and Prospectors and for Forest Rangers. Last year the increase in enrollment between November 15th and the end of the college year amounted to 66.

Of the 450 students under collegiate instruction now enrolled 299 are men and 151 are women. In the Summer Session there

were 29 men and 173 women. In the Preparatory School there are 11 men and 22 women.

The average age of graduating classes for several years has been 23 years and 8 months.

DISTRIBUTION OF STUDENTS UNDER COLLEGIATE INSTRUCTION, SEPTEMBER - NOVEMBER, 1912

By Idaho Counties:

Ada, 54; Adams, 2; Bannock, 8; Bingham, 7; Blaine, 8; Bonneville, 4; Bonner, 8; Boise, 7; Canyon, 27; Cassia, 1; Clearwater, 3; Elmore, 1; Fremont, 4; Idaho, 15; Kootenai, 22; *Latah, 94; Lemhi, 4; Lewis, 6; Lincoln, 11; Nez Perce, 18; Oneida, 5; Owyhee, 4; Shoshone, 22; Twin Falls, 18; Washington, 12.

By States:

California, 2; Colorado, 4; Idaho, 365; Illinois, 2; Iowa, 2; Kansas, 1; Michigan, 2; Minnesota, 3; Missouri, 1; Montana, 6; Nebraska, 1; New York, 2; Oregon, 5; South Carolina, 1; South Dakota, 1; Washington, 47; Wisconsin, 2.

Norway, 1; Japan, 2.

In the Summer Session of 1912 nineteen Idaho counties and fifteen states were represented.

THE PREPARATORY SCHOOL

In April, 1911, on account of the increase in the number of four-year high schools in the state, it was decided by the Regents that no new classes should be organized in secondary subjects contained in the state course of study for high schools. The work of the Preparatory School was to be discontinued gradually by dropping one year at each commencement, and the department finally abolished within three years.

As a consequence of the announcement the enrollment in the Preparatory School, which had been 206 in 1909, decreased to 59 in 1911-12, and the Regents were able to anticipate the final result of their former action by releasing the two instructors

^{*}A large number of students whose names appear in this list and in the Un!versity catalog as residents of Latah County are so catalogued because they temporarily reside in Moscow for the purpose of attending the University.

that were engaged in secondary work, and discontinuing the department as a distinct organization. At the present time there are 33 students who are taking sub-college work. When these have completed their entrance requirements, the Preparatory School of the University will be a thing of the past.

When the institution was opened in the fall of 1892, forty students, all of preparatory grade, presented themselves for entrance. For that year the instruction was confined to high school subjects, and for a number of years the major portion of the work was preparatory in character, and the greater number of the students were enrolled in this department. During its existence the Preparatory School supplemented vigorously the work of the younger high schools of the state, and sent out hundreds of graduates who "made good" in their vocations, and cherish kindly recollections of the school. To these the passing of the Preparatory School will bring some regret. In the main, however, it is a subject of congratulation that the educational institutions of the state have reached that point in their development where the University may definitely discontinue the work that properly belongs to the secondary schools, and the high schools of the state are able to meet their full responsibility in the matter of secondary education.

ENTRANCE REQUIREMENTS

In accordance with a recommendation of the High School Section of the National Education Association, the requirements for entrance to the University have recently been revised.

The standard requirement for high school graduation is sixteen units, or four subjects a year with daily recitations for a period of four years, and until recently the entrance requirements of the University were fixed at sixteen units. Beginning with September, 1912, the quantitative requirement was reduced to fifteen units, in order to allow one unit leeway for the student who is deficient in one subject for one year. The immediate result of the change is to greatly decrease the number of conditioned students. The new requirements also permit a greater freedom of choice on the part of the high school student. Of the total fifteen units not less than eleven units consist of English, foreign language, mathematics, social science, (including history), and

natural science, or other work conducted by recitations and home study. The other four units are left as a margin to be used for additional academic work, or for mechanic arts, household science, commercial work, and any other kind of work that the best interest of the student appears to require. No limitations are imposed upon the use of the margin, except that the instruction should be given by competent teachers, with suitable equipment, in classes not too large, and that the student's work should be of a satisfactory grade. Under this plan it is possible for a high school to introduce into its curriculum any subject that meets the special needs of the community, and for high school students to select with reference to their own abilities and preferences, and to the modes of life they expect to follow.

STANDARDIZATION OF COLLEGES AND UNIVERSITIES

For some time a movement has been on foot in the National Association of State Universities to secure uniform standards of entrance requirements, requirements for degrees, and a greater uniformity in nomenclature. At the same time the United States Commissioner of Education has been interested in an inspection of the colleges that are beneficiaries of the Morrill Acts.

As a result Dr. K. C. Babcock, specialist in Higher Education in the United States Bureau of Education, and cooperating with the National Association of State Universities, has recently inspected the different departments of the University in order to obtain information on which to base a classification of the colleges and universities of the United States. As this is the first time that the National Government has assumed any responsibility in relation to the scholastic standards of the state universities, pending the receipt of Dr. Babcock's report the Regents have been pleased to receive his informal estimate of the work and character of the University, as follows:

"The University of Idaho surprised me by the excellent quality of its equipment in buildings, grounds and laboratories. It appears to have made a wise and vital adjustment of its work to the needs of its Commonwealth, and at the same time to have maintained and enforced in recent years standard entrance requirements. In fact, the rigidity with which it endeavored to

enforce a sixteen-units requirement, when other strong institutions were content with fifteen, was one of the grounds of my criticism of the University.

"The income of the University is reasonably adequate for its present needs, and I see no reason to doubt that the state will treat it as generously in the future as it has in the past. Thus will be insured a continuation of the progress which has marked its recent years.

"The quality of the faculty is surprisingly good, both as to training and experience. Conditions are such that it has a better degree of stability than have several other of the State Universities of the west. The fact that the University of Idaho is the single unified institution of higher education in the care of the state gives it a distinct advantage over similar institutions in Montana, South Dakota, and Oregon.

"By way of summary of my impressions, I should emphasize the soundness of its foundation and support, the sincerity of its administration and work, and the promise of its progress paralleling the growth of the state."

NEW BUILDINGS

The Legislature of 1911 appropriated \$9,500 for stock barns and stables. In the summer of 1911 there was constructed a main barn for beef cattle and calves, 80 by 48, containing box stalls, feed rooms and storage for grain and hay, and a thoroughly modern and sanitary dairy wing 58 by 36 was erected west of and near the University campus. The new stock judging pavilion, splendidly lighted, with furnace heat and seating 130 students is prominently located mid-way between the stock barns and Morrill Hall.

The same Legislature appropriated \$75,000 for the Auditorium Wing of the Administration Building, and the U. of I. Improvement Fund 1909 contained a balance of \$16,224 for the same service. Mr. J. E. Cunningham, of Spokane, was awarded the contract under competition, and the items of expenditure in the construction of the Auditorium Wing are as follows:

Contract price	\$84,730.00
Extras	
Heating, ventilating, etc.	
Seating	
Architect	4,353.00

The Auditorium seats one thousand people below the balcony. The building is fire-proof, with a tile roof. The cost of construction is a little less than 12 cents per cubic foot. The building will be ready for occupancy at the opening of the second semester.

FORESTRY BUILDING

At the April, 1911, meeting of the Board of Regents of the University of Idaho, the following resolution was adopted:

Whereas, the Regents have been notified that Hon. Wm. Deary, for the Potlatch Lumber Company, has offered to donate to the University of Idaho the sum of Ten Thousand Dollars toward the erection of a suitable Forestry Building on the University Campus; and

Whereas, this is the first gift of any considerable amount the University has ever received for this or any other purpose; therefore be it

Resolved, That the Regents accept the gift on behalf of the Institution;

That the thanks and appreciation of the Board are expressed to Mr. Deary for this gift and for his interest in the upbuilding of the Forestry Department of the University;

That the gift of Mr. Deary at this time when the financial aid of the state is insufficient to meet the most pressing need of the University for buildings and equipment is particularly gratifying to the Regents as indicating a just appreciation of the work they are trying to accomplish for the state through the University.

In December, 1911, at a meeting of the North Idaho Forestry Association, a resolution was passed to the effect that it be the sense of those present that the members of the Association prorate their holdings in the state of Idaho to the extent of Fifty-eight Thousand Dollars but not to exceed five cents per acre for each member for the purpose of erecting a Forestry Building at the University of Idaho. After a further conference it was decided to ask all the timber owners of the state to contribute, and on a flat rather than on an acreage basis.

The committee from the North Idaho Forestry Association has been cooperating with a committee from the University in soliciting funds, and at this time approximately Twenty-nine Thousand Dollars has been contributed toward the erection of the building.

ESTIMATES ON STATE ACCOUNT FOR 1913-15

The Legislature of 1911 made the following provision for the different departments of the University for the biennial period:

For general maintenance	\$99,800.00
For buildings and permanent improvements	28.934.00
For the purchase of land	13,000.00
For live stock	4,500.00
For stock barns and stables	9,500.00
For agricultural extension and experiment farms	50,000,00
For the North Wing of the Administration Building (bond issue)	75,000.00

By executive action the appropriation for general maintenance was reduced from \$99,800 to \$80,000; the appropriation of \$28,934 for buildings and permanent improvements was vetoed, and an item of \$50,000 for agricultural extension was reduced to \$24,000. As a result of this cut in the appropriation for maintenance, the University has been unable to make any additions to the faculty in any department, except Agricultural and Domestic Science. The proposed appropriations for departmental budgets were reduced by one-half, and the University Library received less than one-third of the amount that was thought to be necessary for up-keep and reasonable growth. The loss of the appropriation for betterments was met by postponing building repairs that ought to have been ordered at once; by re-laying worn-out board walks instead of replacing them by permanent concrete sidewalks; by postponing the improvements in the heating system to a distant date, and by promising the roofs of the different buildings a coat of paint at a more convenient season.

The estimates recommended for the general appropriation bill for University maintenance for the biennial period are as follows:

FOR GENERAL MAINTENANCE AND BETTERMENTS

Salaries, including a Professorship of Education, a Professorship
of Auditing and Accounting, an Assistant Librarian, two
additional Instructors, and an addition of \$100.00 to the an-
nual salaries of Instructors occupying full Professorships\$105,300.00
Labor and Operation of Plant
Departmental Supplies
Departmental Apparatus, Machinery, Tools, and Equipment 35,242.00

Freight, Express, Postage, Telegraph and Telephone	4,331.00
Heat, Light, Water, and Power	17,634.00
Improvements to Heating Plant and Steam Line	8,000.00
Printing, Office Supplies	3,894.00
Traveling Expenses	4.167.00
Insurance	2,531.00
Library, Books, and Periodicals	1,700.00
New Shelving	2,200.00
For Purchase of Land	15,000.00
Buildings and Grounds, including Grading	14,000.00
Improvements on Athletic Field	4,403.00
Miscellaneous	2,765.00
Total\$	277,627.00
Deduct estimated receipts from endowment funds	120,000.00
Amount recommended for appropriation bill for General University Maintenance	157,623.00
FOR BUILDINGS AND PERMANENT IMPROVEMENTS	
Economics	\$100,000.00
For Men's Dormitory and Dining Hall	75,000.00
For Men's Dormitory and Dining Hall	75,000.00
For Men's Dormitory and Dining Hall	75,000.00
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds.
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds. \$35,000.00
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds.
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds. \$35,000.00
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds. \$35,000.00
For Men's Dormitory and Dining Hall. Total. FOR AGRICULTURE General Appropriation Farm Engineering and Agronomy Building. Poultry Buildings and Maintenance. \$3,000.00 Live Stock. 2,000.00 Purchase of Land and Building Sites. 13,200.00 Publication of Bulletins. 2,000.00 Soil Survey of State. 8,000.00	75,000.00 \$175,000.00 Bonds. \$35,000.00 3,000.00
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds. \$35,000.00
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds. \$35,000.00 3,000.00
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds. \$35,000.00 3,000.00
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds. \$35,000.00 3,000.00
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds. \$35,000.00 3,000.00
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds. \$35,000.00 3,000.00
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds. \$35,000.00 3,000.00
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds. \$35,000.00 3,000.00
For Men's Dormitory and Dining Hall. Total. FOR AGRICULTURE General Appropriation Farm Engineering and Agronomy Building. Poultry Buildings and Maintenance. \$3,000.00 Live Stock. 2,000.00 Purchase of Land and Building Sites. 13,200.00 Publication of Bulletins. 2,000.00 Soil Survey of State. 8,000.00 Farm Buildings, Clagstone Demonstration Farm. 4,800.00 Maintenance and Improvements, Clagstone Demonstration Farm Dairy Barn and Equipment, Caldwell Demonstration Farm Dairy Herd and Equipment, Caldwell Demonstration Farm 2,000.00 Maintenance Caldwell Demonstration Farm 4,000.00 Maintenance Gooding Demonstration Farm 4,000.00 Maintenance and Equipment Aberdeen Demonstration Farm 5,000.00	75,000.00 \$175,000.00 Bonds. \$35,000.00 3,000.00
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds. \$35,000.00 3,000.00
For Men's Dormitory and Dining Hall	75,000.00 \$175,000.00 Bonds. \$35,000.00 3,000.00

COURSES OF INSTRUCTION

In connection with the standard of admission and the requirements for graduation, the courses of instruction which are actually being taught in an institution at any given time afford one of the most important indications of its value and rank educationally.

The number of classes in College during the first semester of 1912-13 is two hundred and eighteen, in the School of Practical Agriculture, thirty-one, and in the Preparatory School, seven.

The subjoined table gives (1) the several departments; (2) the catalog number and title of the various subjects being taught this semester; (3) the number of credit-hours per week in each; and (4) the number of students taking each subject.

FIRST SEMESTER, 1912-13 COLLEGE

THE LIBRARY

The total amount of money expended for books, periodicals, furniture and supplies during the past two years was \$7295.54. This amount was appropriated by the Regents out of the general maintenance fund.

During the past two years a portion of the basement has been set aside as storage space for the Library, which, although not a satisfactory arrangement, has been made necessary by lack of sufficient shelving and space in the reading room. During this time the number of books, exclusive of documents and pamphlets, has been increased from 12,236 to 16,216 volumes. The government documents will bring the total to about 30,000 volumes.

There have been no additions to the Library staff since the last report.

Research work has been carried on in forestry, ore-dressing, civil engineering, chemistry, and metallurgy, which together with the thesis work of the senior and graduate students makes a constant demand for the latest scientific books and journals. A further demand for both library space and books has been caused by the gradual change in methods of teaching, the instructors requiring more reading of the students, and also by the increase in the number of the student body. The Library is the one part of the University which is of common interest to all members of the faculty, and this interest is shown by the constant use of the Library and a greater demand for the latest scientific and technical books and periodideals.

In order to meet the natural growth of the Library the following needs should be anticipated:

- 1. Increased Floor Space. At present there is room for only one hundred chairs. Room is also required for additional shelving, as the space now used is overcrowded and books have to be stored in the basement, where they are being injured by dampness, and where they are very difficult of access when required.
- 2. Books and Periodicals. In order to keep the Library up to date in the various subjects in which courses of instruction are offered, as well as to replace some of the books lost by fire in 1906, at least \$7500.00 per year should be spent during the next two years, to meet these requirements alone.
- 3. Furniture and Fixtures. In order to provide shelving for new books we should have at least ten floor cases like those now in the Library. Place could be made for them by crowding those which we now have. Additional tables and chairs for fifty should be provided. By very much overcrowding, these could be placed in the present reading room. Shelving, table, and chairs would cost about \$2200.
 - 4. Employees. In order to bring the Library up to its full

efficiency, a complete catalog is required, as an uncataloged library is less than one-half as efficient as one that has been thoroughly catalogued and all material made available. At present our Library can not be kept open evenings as are most college and university libraries. Our students and faculty are anxious that this be done, and it seems that the demand can be best met by the addition of a cataloguer to the present staff. The work might then be shifted so that both a catalog and evening opening could be provided for. The salary of a competent cataloguer should not be less than \$900.00 per year.

The total amount asked for for the Library for two years is then:

Books and Periodicals. \$ 15 Shelving and Furniture. 2 Cataloguer's Salary. 1	2,200.00
\$ 10	0,000,00

AGRICULTURE

The Agricultural College of the University divides itself very naturally into three departments, namely: First, the Agricultural College proper, which has to do with the education of the students who may come to the institution for training in the scientific and practical phases of agricultural work. The College is supported in this work by approximately one-third of the funds available under the Morrill Act; by the income derived from the sale and lease of Agricultural College lands set aside for this purpose; and by special state appropriations.

Second, The Experiment Station which has for its purpose a solution of the problems relating to agriculture. The funds available for this purpose are derived from Federal appropriations, and up to the present time have had no support from state appropriations.

Third, The Extension Department, or Division of the work which has for its purpose the disseminating of information among farmers and home builders of the state through the medium of demonstration farms, farmers' institutes, movable schools of agriculture, and traveling specialists or fieldmen.

The Agricultural College part of this institution does not have a very brilliant history in the matters of graduates nor of students. In the college year of 1906 and 1907 the Agricultural College had but one student; in 1907 and 1908 but four students registered for agricultural work; in 1908 and 1909 twenty-three students; in 1909 and 1910 thirty-five; in 1910 and 1911 forty-eight; in 1911 and 1912 fifty-eight; and in 1912 and 1913 seventy-two. These are students taking the regular college work in the four-year scientific courses in Agriculture and Forestry. It will be seen that there has been a marked increase in numbers in attendance during the past seven years.

In addition to this course of study, there has been offered during the past three years a course of study designed for young men and women from the farms of the state who could not be interested in a four-year high school course to be followed by four years of scientific work along agricultural lines in a University. The Agricultural College, therefore, offers a course of study known as the Practical School in Agriculture, which is a course of three winters' work beginning the 15th of October, after the farm work is well over the summer, and closing on the 15th of March, in good season to return to the farm for spring seeding. For this course, in 1910, there were thirty-five students entered; in 1911 this was increased to fifty-nine and in 1912 to seventy-nine. The total number of students, therefore, in attendance at the Agricultural College for the past three years has been: Eighty-three in 1910; one hundred and seventeen in 1911; and one hundred and fifty-one in 1912.

The College at the present time is progressing as rapidly as any other similar institution in the west. It is greatly handicapped in many respects at the present time by inadequate laboratory equipment; and this handicap is going to be greater as the students increase in numbers. Agriculture is an applied science, if it can be called a science at all, and for that reason it must be taught, if taught successfully, very largely by the laboratory method. This method, as everyone knows, is a very expensive means of imparting information, but the only satisfactory way that it can be done.

The class rooms and laboratories of Morrill Hall, the building now set apart for the accommodation of the Agricultural College, are very inadequate. In the matter of Farm Engineering, which has to do with all kinds of farm motors and farm machinery, the college has had to rent for the past two years an old discarded warehouse down in the city of Moscow to accommodate this department. The building is old and dilapidated, not well lighted, and very cold.

The Department of Agronomy, which has to do with field crops and farm management generally, has no suitable laboratory. They have been endeavoring to use one of the small class rooms in Morrill Hall, and have used the old one-story Annex back of the Administration building for storage. This has been very unsatisfactory; and, as it has been almost impossible to maintain the interest in this very important branch of instruction, there is very urgent need of a building for the joint accommodation of the Farm Engineering and Agronomy divisions of the work. A suitable building, with class rooms and laboratories, can be constructed for \$35,000.00. As soon as a suitable building is provided, the Agricultural Engineering Department can secure all kinds of farm machinery, farm motors, and other equipment that they may desire from the manufacturers without cost to the University. Successful agriculture today can only be carried on with proper machinery. It is highly important that our students should have an intimate acquaintance with the construction and management of all kinds of machinery, farm motors, etc. The day is not far distant when electricity is going to play a very important part in agricultural work, and it is important that the young farmers who are preparing themselves for the future should have some knowledge along this line.

Another very important line of work, which the College has been unable to take up at all, has been the poultry industry. There has been a very urgent demand for the establishment of this Division, but so far there have been no funds available. The poultry interests of the state are large and very important. A very great interest is manifested through the correspondence received at the College in this industry, and our students are anxious to gather information which we are not in a position to give. It is urgently desired, therefore, that an appropriation of \$6,500.00 be secured for the establishment and maintenance for the next two years of a Poultry department. This division, in common with the Live Stock or Animal Husbandry Division,

can be made self-supporting and of immense service to the small farmers and laboring classes in this state.

The Live Stock Division, at the present time, is in excellent condition insofar as it goes. There has been sold from this division from October 1, 1911, to October 1, 1912, \$6,849.79 worth of live stock. We still need some new types and representatives in this department, and some additional equipment; for instance, we have at this time no barns or stables for the sheep or for the hogs. There should be an appropriation of at least \$2000.00 for this division, which is one of the most important and also one that can be made to produce a good revenue when once well established.

The University campus has never been completed; and, particularly that portion that has been set aside for the Agricultural College has a large number of privately owned houses and lots cutting into it in various places. Immediately adjoining the new stock and dairy barns on the college farm there is a tract of five acres of land with a house, barn and orchard that very seriously interferes with a convenient arrangement of the farm buildings and roads. This five acres of land should be purchased without delay. There is also required for a suitable location for an Agronomy and Farm Engineering building a tract of four acres, within the city limits, on which there are two good houses, and which will ultimately be required for other University buildings. These two tracts will cost \$9000.00. can be purchased for that now, but if other improvements are added to them, which probably will be the case, they will cost very much more. The timber interests of the state have assessed themselves a sufficient sum to pledge the University with the construction of a Forestry building to cost \$60,000.00. It will be necessary for the Agricultural College to ask the state for an appropriation of \$1,700.00 to buy a small tract of land as a site for this building. The site has been chosen by a committee of the lumbermen and an option has been secured upon it for the above sum. Immediately adjoining Morrill Hall on the north is a strip of land separating the Hall from the street, which sheuld be purchased as soon as it can be secured. Three lots of this strip are now on the market; and, while there is a very good house situated on them, they can be secured for

\$1,500.00 and these should be purchased as soon as possible. There are also two acres of land lying right in the center of the Agricultural College campus that have been rented by the College for several years, and upon which they have an option to purchase for \$1000.00. This option expires early in June of 1913, and should be taken up by all means.

EXPERIMENT STATION

The Agricultural Experiment Station of Idaho has not had any direct appropriations from the state for its maintenance or support since its establishment. The money for this work and for the publication of the bulletins giving the results of such experiments and research work as has been undertaken, has been supplied by Federal appropriations for the support of such Experiment Station work. In the earlier years, during which these Federal appropriations were available, there were few restrictions placed upon the expenditure of this money. In recent years, however, the Office of Experiment Stations in the United States Department of Agriculture has deemed it necessary to restrict the use of this money to certain classes of experimental station work. They having deemed it necessary to require the various states to appropriate sufficient funds to extend the work of the Station so as to bring it within the practical field for the direct benefit of the farmers of the state. This ruling has not affected the older and more wealthy states, as they have always appropriated more or less state funds for the furtherance of this experimental work, but it does, however, seriously affect the Experiment Station in Idaho, for the reason that they have restricted the expenditure of these Federal funds very largely to research work; and, in the matter of publications, they restrict the use of the funds for this purpose to the publication of the results of actual research work at the Station. It is a well-known fact that the science of agriculture is at least ten years ahead of the practice; in other words, there is a vast amount of really valuable information that has been compiled from successful farm practice and from the various Experiment Stations that is not in a form available for the general farmers of this state. At present we have no means of disseminating this information. The state should appropriate an amount equal to that available

from Federal funds-this, however, would be asking too much of our state legislature at this time. The Experiment Station should have an appropriation of \$2000.00 for the next biennial period for the purpose of publishing bulletins and putting them in reach of farmers of this state. At the present time, owing to the increase in the Station force, and in the amount of work that has been undertaken in research lines, seventy-five per cent of the Federal funds are utilized in paying salaries of the various professors and experts in the Agricultural Department who are devoting a portion of their time to reasearch work in addition to conducting the classes in the Agricultural College. experiments are now under way in an endeavor to determine the proper handling of the soils of this state in order to maintain and increase their fertility through the aid of the bacteria in the soil. Sufficient work has already been done to render it absolutely certain that the fertility of much of the soil in Idaho is dependent very largely on the action of some form of bacteria, which is as yet very little understood. This Station has taken the lead in this bacterial research work; and, from results already obtained, we hope soon to have something ready for publication that will be of importance and valuable to the farmers of the state and nation.

In the Horticultural field, several lines of investigation are under way, looking to the solution of problems affecting the growing of tomatoes, onions and other garden vegetables; and also in a line of research from which we hope to develop an Idaho apple of especial merit for Idaho conditions. Three years' work has already been done in this line, and we have very promising results.

In the Chemistry Department, a vast amount of work has been done in the study of the wheats of this state and their comparative value for milling purposes.

In Agronomy, a careful study is being made of the different grains and grasses that may be most valuable for our conditions in Idaho. Some work is also being undertaken with an idea of determining a proper rotation of crops for the maintenance of soil fertility and for the most productive yields of those crops which will bring in the largest returns financially.

In the Animal Husbandry Division, feeding experiments are

being undertaken with hogs, sheep, and cattle. In each case, we are hoping to determine the value of alfalfa hay and the various small grains that are now being raised in this state for the purpose of feeding live stock of some kind. Idaho is the third greatest state in the Union for sheep production; and yet we finish very few lambs or sheep in order to make them ready for the best market.

In the Division of Soils some work is being done in the matter of a classification of the soils of the state. This work should be greatly extended. We have a wide variety of soils in the state of Idaho, and no one has very much knowledge as to their composition or value. It is very important that this work should be taken up systematically and a complete primary survey made; also an analysis of the various types of soils and a classification as to their value for certain crops. An appropriation of \$8,000.00 for the next biennial period should be made for this purpose. It is the practice of the United States Geological Survey to spend an equal amount to that appropriated by any state for work of this sort.

UNIVERSITY EXTENSION

The Extension Department of the Agricultural College and Experiment Station is probably the most important field at the present time in the state of Idaho. The farming industry in this state is in its infancy. Hundreds of thousands of acres of land have recently been reclaimed from the desert, and thousands of farmers who have taken up this land have no knowledge of our conditions and no means of obtaining information that will help them to succeed. Farmers' institutes have been held in this state for many years. While these are valuable as a means of inspiration and help, yet they cannot give that detail of instruction that is required by these new farmers in all parts of this state.

Four years ago there was appropriated the sum of \$8,000.00 for the biennial period for the conduct of several demonstration farms and for the holding of institutes within the state. Two years ago the legislature appropriated \$50,000.00 for the extension work in the state, which was later reduced by executive action to \$24,000.00 for the biennial period. Under these appropriations

there have been four demonstration farms established in the state. The first of these to be located was the one at Caldwell. This, unfortunately, has not been a very great success, owing to its unfortunate location, the farm being underlaid with a rock hardpan to a depth of several feet, with only from twelve to eighteen inches of surface soil. At this farm, therefore, it has been necessary to make a soil problem of the work rather than a demonstration farm, and it will require a good many years to obtain reliable results from its conduct along these lines.

The Gooding demonstration farm consists of forty acres, and is one of the most valuable of its kind in the United Staets. Here the work has been in the nature of investigations along the lines of irrigation and irrigation farming. Results have been obtained on this farm on the use and duty of water under irrigation that have already been of immense value to the farms of that district, and the farm is only in its beginning.

Another demonstration farm has been established in the cutover timber lands in northern Idaho, and is located at Clagstone, in Bonner county. The problem in this section is to determine the best method of clearing this land and preparing it for the production of profitable crops. This section of Idaho is especially adapted for live stock and dairying, and we hope to develop this farm along those lines.

A Dry Farming Station has recently been established within the past year at Aberdeen, in Bingham county. The object of this demonstration farm is to determine the best method of developing and maintaining the immense acreage of dry-farming territory in southern Idaho and the growing and disseminating of seed for crops adapted to this system of farming.

In addition to the demonstration farms, there has been established a system of Movable Schools of Agriculture. These schools are planned to improve and extend the work of the Farmers' Institutes. The schools are held for one or two weks and are scattered throughout the state so as to reach as many farmers as possible. Actual demonstration and practical instruction is given in the particular branches of farming that are being or should be carried on in the section where the school is being held. Last year there were nine of these schools conducted in southern Idaho of one week each. The average daily

attendance of these schools ranged from eighty-two to two hundred and thirteen. The demand for this work has been very great for the coming year, and fifteen schools have been arranged for. The Farmers' Institute work has not been neglected, since this work can be taken into more remote sections of the state where the farm schools can not be held.

There was also conducted last year a demonstration train equipped with live stock and agricultural exhibits representing experimental work over every railroad line in the state. In northern Idaho there was an attendance upon the demonstration train service of 6,087 visitors. In southern Idaho there were seventy-eight towns visited and a total of two hundred and forty lectures given to a total attendance at the lectures and for the inspection of the train of 13,952 persons. During the year there were fifty Farmers' Institutes held with a total attendance of 3,675 persons. In the fifty institutes there were one hundred and eleven sessions of an average of two and one-half hours in length. Practically every county in the state has been reached in this work.

In addition to the demonstration farms, movable schools, farmers' institutes, and demonstration trains, there has been one fieldman engaged permanently in advancing the dairy industry in southern Idaho. This work has been exceedingly valuable and should be extended and continued the coming two years. There has been a county agricultural expert employed in Lincoln County, and also one in Bonner County during a part of the past year. Also, there has been a pure seed commissioner employed in the work of carrying out the provisions of the pure seed law passed at the last session of the legislature and in developing the growing of pure seeds as an industry.

The work at the Gooding demonstration farm and also at the Aberdeen demonstration farm, has been conducted jointly by the state and the United States Department of Agriculture. The Department of Agriculture have also cooperated with the state and the counties in the employment of a fieldman at work in this state. The general plan being for the state to furnish one-half of the funds and the Department of Agriculture the other half. This work can be greatly extended and improved with an increased appropriation. The plans for the demonstration farms

for the coming biennial period include the construction of a small residence and barn with some few outbuildings on the Clagstone farm. At present there are no buildings except a small office building. It is desired to make of this farm a live stock demonstration farm in addition to the demonstration work in the clearing of the land. The improvements will call for an expenditure of at least \$3,600.00 in order to make it of any great service to the people of north Idaho. It will also require an expenditure of \$3,000.00 annually for maintenance until it can be put on an income basis, which should be accomplished in a few years.

The Caldwell demonstration farm should be equipped as a demonstration dairy farm for south Idaho. Dairying is bound to be one of the greatest industries of south Idaho, and the state can do no greater good at the present time than by conducting this farm as a demonstration in this particular field. It is now equipped with a good house and a seed house, together with suitable farm machinery, but should have a modern farmer's dairy barn and a dairy herd; and, when this is done, it would soon be placed upon a self-supporting basis. Four thousand dollars should be expended for the establishment of this dairy work the coming year. In addition there should be available \$4,000.00 for the support and development of this Station for the next biennial period.

In our agreement with the United States Department of Agriculture we are required to expend \$2,000.00 annually for the support and maintenance of the Gooding Experiment Station. This would make \$4,000.00 for the next biennial period. At the Aberdeen Station, which is newly established and also on a cooperative basis with the government, there will be required at least \$5,000.00 for the next biennial period. In addition to the fieldman already employed, we should have a thoroughly competent woman to take charge of the extension work in Home Economics, and there should also be provision made for a fieldman in Horticulture. Thousands of acres of land are being planted to fruit trees each year in this state, the majority of which, perhaps, can never be made profitable for the production of fruit, owing to the fact that suitable varieties are not planted; and what varieties are planted are being set out in locations not

adapted for fruit raising. A great amount of money can be saved to the farmers of this state by a field horticulturist who could devote his time to meeting these people wishing information on this subject. The sum of money desired for the continuance and the extension of the movable school work, farmers' institutes and fieldmen will be in addition to the work above outlined.

The United States Department of Agriculture is very desirous of further cooperation in the study of the matter of practical irrigation. They are already expending quite a good deal of money on this work, but are not able to accomplish the work which they hope to do because of the lack of funds. In order to more fully cooperate in this work the Agricultural College and Experiment Station should have the sum of \$5,000.00 for the next biennial period to be expended in irrigation investigations in cooperation with the United States Department of Agriculture.

The Agricultural College, therefore, requires the following appropriations for the successful conduct of its legitimate work for the next two years:

COLLEGE.

COLLEGE.	
Farm Engineering and Agronomy Building	35,000.00 6,000.00 2,000.00 13,200.00
EXPERIMENT STATION.

AGRICULTURAL EXTENSION UNIVERSITY OF IDAHO AUGUST 1, 1911, TO SEPTEMBER 30, 1912

Dean W. L. Carlyle,

University of Idaho,

Moscow, Idaho.

Dear Sir:-

I respectfully present my first annual report covering the work of the Agricultural Extension Department from August 1st, 1911, to September 30th, 1912.

OUTLINE OF THE WORK

I began my work for the University July 22nd, 1911. At your request I gave ten days' lectures at the Summer Normal at Sandpoint, Idaho, as my first work. These were lectures on Agriculture seeking to answer these two questions for the rural teachers: What to Teach, and How to Teach Practical Agriculture in the Rural Schools of our State.

Early in August, in your office, we planned out the work for my department for the coming year.

The central office for the work was retained in Boise. My predecessor, Professor F. D. Farrell, had organized the preceding year the Extension work for South Idaho, and had been given supervision of the sub-station work in that part of the state in addition to the regular Extension work for South Idaho.

The Extension work, at the beginning of my service, was broadened to serve the entire state, and I was given the general supervision of the North Idaho Station at Clagstone Junction, as well as the stations in South Idaho.

It was agreed further that I was to do all I could for the furtherance of agricultural instruction in the rural schools of the state.

For my own convenience and to better systematize the work, I divided my duties into the following divisions:

I. Agricultural Education.

Il. Movable Schools and Farmers' Institute Work.

III. Demonstration Trains.

IV. Sub-Station Work.
V. General Office and Correspondence Work.

We will report upon each in detail.

I. AGRICULTURAL EDUCATION

The laws of Idaho now require rural teachers to take an examination in Agriculture showing qualifications for teaching this subject in the rural schools. My Sandpoint experience convinced me that but a small fraction of the rural school teachers were prepared to give practical instruction in Agriculture in their schools. Since they were in said schools at work the only way to render immediate help was to either put out, in pamphlet form, outlines to help them, or institute a correspondence course of lectures giving the information which they desired and really needed. Conferring with Miss Shepherd, our State Superintendent, I found that there was no fund to cover publication or pamphlet or lectures. This being new work there was no extension fund to cover same. We therefore decided upon the preparing of some sixteen lectures to be given to Miss Shepherd's office, these to be sent out to each County Superintendent, and they in turn agreed to send copies for their rural teachers. Members of your Agricultural College staff of workers very kindly helped me to prepare an outline lecture form as follows:

Lecture I. Soils of the Rocky Mountain Region. W. H. Olin.

Lecture II. Plant Life. W. H. Olin.

Lecture III. Live Stock on the Farm. Dean W. L. Carlyle and Prof. Iddings.

Lecture IV. Sheep, Swine, and Poultry. Dean W. L. Carlyle and Prof. Iddings.

Lecture V. Domestic Art and Science. Miss Alba Bales.

Lecture VI. Domestic Art and Science, concluded. Miss Alba Bales.

Lecture VII. The Weather Bureau and the Farmer. Mr. Edward L. Well, Director Idaho Station, U. S. Weather Bureau.

Lecture VIII. Fundamental Terms in Irrigation Practice. W. H. Olin.

Lecture. IX. A Lesson on Idaho Forests and Their Relation to Agriculture. Prof. C. H. Shattuck.

Lecture X. Seed Selection and Seed Testing. W. H. Olin.

Lecture XI. Fundamentals of Dry Farming. W. H. Olin.

Lecture XII. Common Diseases of Live Stock in Idaho. Dr. E. T. Baker.

Lecture XIII. Studies in Hygiene. Applied to Rural Conditions. Prof. J. F. Nicholson.

Lecture XIV. Fruit Culture in Idaho. J. U. McPherson, State Fruit Inspector.

Lecture XV. Spraying to Combat Insect Ravages in Orchards. J. U. McPherson, State Fruit Inspector.

Lecture XVI. Potato Culture Clubs. Extension Bulletin No. 1. W. H. Olin.

Early in November I gave a series of lectures in Agriculture to rural teachers at a joint institute at Pocatello, where teachers from eleven counties assembled for a week's instruction on pedagogical lines. At a similar gathering of teachers at Lewiston, second week in November, I gave lectures on Agriculture; also first week of January, 1912; and last week of August in Boise. Last of March addressed teachers of Kootenai and Shoshone counties at Coeur d'Alene, and Bonner county at Sandpoint. I also addressed a County Trustees' meeting upon Agricultural Education in Rural Schools, at Weiser, Sandpoint and Coeur d'Alene, in February and March respectively.

I have thus within the year been able to reach more than three thousand teachers. Besides this, I assisted your workers the last week of the Summer Normal in July at the University.

II. MOVABLE SCHOOLS VISITATION AND PLAN OF ORGANIZATION

To determine the best locality for the Movable Schools, where we might do the greatest good to the greatest number, I made a careful study of South Idaho and the settlements therein.

I visited personally every point that seemed at all-feasible for this work, and talked with the leaders of that locality. Professor F. D. Farrell gave some very good suggestions about many of these points and helped us greatly in this phase of the work.

Because of our limited means and time at our disposal for these schools with two demonstration trains to run, we made one week of six days the full time limit of these schools.

To determine the extent of interest at each place and to insure the attendance adequate to the necessary expense of holding a Movable School, we sent out a petition form and asked for at least one hundred fifty farmers to sign same calling for the establishment of the school at that point and agreeing to attend a part or the whole of the time the school should be held.

No fee was required beyond their local expense, but each locality desiring to hold the school was asked to furnish a well-lighted, well-heated hall for the meetings; agreed to room and board, at some central point, the corps of instructors for the week the school shall be held, without expense to said instruct-

ors; and to appoint such committees as shall be asked for, to prepare, with the Extension Department, the details of the school.

We sought to fairly well distribute these schools over South Idaho, where we could most advantageously work and which did not have a Movable School the preceding year.

CYCLES

Because we felt we could economically and effectively handle the schools in cycles of three, we divided the schools on that basis, grouping the three schools together that we felt we might most advantageously reach. The first cycle consisted of three schools on the North and South Side Twin Falls Tract at Jerome, Burley and Buhl, held under the auspices of the Commercial Clubs at Burley and Buhl, and under the direction of the Farmers' Union at Jerome; time February 5th to 10th. The second cycle was to have included Fruitland in its group, but a serious scourge of scarlet fever closed the schools and rendered this impracticable, so Kuna was chosen instead. This gave us Fair Acres Grange, eight miles south of Notus, Kuna and King Hill. We cooperated with the Commercial Club at Kuna, the Farmers' Club at King Hill, and the Grange at Fair Acres; time February 12th to 17th. The third cycle was given to Aberdeen, Bancroft and Rigby, cooperating with Commercial Clubs at the first two, and the Farmers' Union at the latter place; time February 19th to 24th.

SESSIONS HELD

We arranged to hold sessions at such hours as would be convenient to farmers to attend. Forenoon sessions, 10 to 12 a. m.; afternoon, 2 to 4 p. m. For the benefit of the people of the town who very largely contributed to finance the school, we gave three evening lectures of an interesting and popular nature upon subjects correlative to the work of the school. Thus we had lectures beginning at 8 p. m. each Monday, Wednesday and Friday nights of each cycle of schools. This gave fifteen sessions to each school held.

Many farmers attending in the daytime found it possible to

go out some several miles, "do up the chores," and be in for these evening sessions, which were quite generally well attended.

DOMESTIC SCIENCE SCHOOLS

The call for some Domestic Science work in connection with these schools was most urgent and insistent. Because the Extension Department had no worker in this line, arrangements were made with President Black of Lewiston State Normal, Miss Alba Bales of the same school, and Mrs. E. J. Iddings of Moscow, whereby Mrs. Iddings took Miss Bales' classes at the Normal, while Miss Bales came to assist us in the Movable School work.

To make the circuit of the nine schools seemed too strenuous and we, therefore, gave a full week to this work at each of the following named points: Burley, Fair Acres Grange Hall, and Aberdeen.

Monday of each week was spent by Miss Bales in conference with those who desired to take up the work, and from this "gettogether meeting" Miss Bales obtained the facts which enabled her to plan the work of the week to fit the needs. She found that using the morning for conference and giving the work she desired them to have in the afternoon gave the best results. Thus, the busy housewife got her work out of the way before dinner so she could give the afternoon to the Movable School.

At the Burley school a number of women walked in from the country several miles to the lectures daily. At the close of the week's work the ladies of the Burley School gave a chicken dinner under Miss Bales' direction, which was a pronounced success. These women cleared more than enough to pay all expenses of the school. Over one hundred were in attendance at this school.

The Fair Acres Grange people were to secure a tent for the Domestic Science School, but, failing to do so, the lectures were given in the Grange Hall with demonstrations afternoons in a nearby farmhouse. About fifty ladies took the work here.

At Aberdeen a special room was fitted up temporarily with such apparatus as could be assembled. The ladies of Aberdeen most fully appreciated the privilege of having this work. Over seventy-five ladies took the work for the entire week.

CORPS OF INSTRUCTORS IN THE MOVABLE SCHOOLS

- AICHER, L. C. Supt. Dry Farm Station at Aberdeen. Topic, Alfalfa (Non-Irrigated) and Dry Farming.
- Bark, Don H. In charge of U. S. Office of Irrigations for Idaho. Topic, Duty of Water.
- BLISS, E. R. Pres. Colo. Farmers' Congress and State Seed Growers' Association, Greeley, Colo. Topic, Potato Farming.
- Gregg, O. C. Dairy Farmer and Institute Lecturer, Lynd, Minn. Topic, Dairying.
- IDDINGS, E. J. Prof. Animal Husbandry, U. of I., Moscow, Idaho. Topic, General Live Stock Farming.
- MCPHERSON, J. U. State Fruit Inspector, State House, Boise. Topic, Horticulture.
- OLIN, W. H. Director, Agricultural Extension, U. of I. Topic, Soils, Seed Selection, Crop Rotation, Dry Farming.
- RISSER, A. K. Western Manager, U. S. Dairy Division, Colorado Springs, Colo. Topic, Dairying.
- Tallman, A. V. Assisting Engineer, U. S. Office Irrigation Investigations for Idaho, Boise, Idaho. Topic, Duty of Water.
- Welch, J. S. Superintendent of Experiment Station, Gooding. Topic, Soil Fertility.

EVENING LECTURES

ARNOLD, E. C. Atty. at Law, Boise, Idaho.

BARK. DON H.

MACLEAN, JAMES A. President U. of I., Moscow, Idaho.

McPherson, J. U.

OLIN, W. H.

Shepherd, Grace M. State Supt. of Public Instruction, State House, Boise, Idaho.

15th		175	75
Average Attendance		186	102

In interest and number in daily attendance the Burley School led, with Rigby a close second. These schools certainly have proven centers of interest and through them the University is being brought into closer touch with the farmers and the people of the various towns where they are held.

The people appreciated meeting President MacLean, and we were quite fortunate in having a lecture from him at each Movable School. Mr. Bark could not make all his dates, but sent Mr. A. V. Tallman, a competent assistant engineer, where he could not be, so there was no date for irrigation discussion that was not filled. We found that making a day for potatoes or fruit, or irrigation or live stock, or dairying, was quite desirable. This gave the farmer a chance to have his questions answered,

and if persons could not attend the entire week they made it a point to be there on the day when the particular topics they were most interested in were discussed.

At each school a special committee provided animals for a live stock demonstration and a suitable place to hold same. Another committee provided grain, soil, potatoes, and grass samples for school examination and discussion, while still another committee looked after fruit samples desired by the horticultural lecturer.

The work with potatoes led to the reorganization of a potato growers' association at Aberdeen, and the formation of a new one at Rigby.

Mr. Bliss, our potato lecturer, was so pleased with the possibilities of good seed production on the dry farms around Rigby and Aberdeen that he desired to test the growing of the same in a practical way. He therefore agreed, on leaving us at Aberdeen, to send out four sacks of seed Pearls for us to test with dry farmers adjacent to the station, where Superintendent Aicher could superintend the work.

These schools are carrying the College of Agriculture of the University to the people in a most effective and, in my judgment, a most practical way. May we soon have the funds to do more of this work and reach every part of the state not now served.

FARMERS' INSTITUTES

The report upon the Farmers' Institutes is given in the report on the Northern Pacific Demonstration Train. They were "follow-up" institutes and for that reason are given with the train report. The Farmers' Institutes were begun in South Idaho at Emmett, January 29th. Superintendent Knipe of the city schools, and the Commercial Club united in making the meetings a success. The meetings were held in the high school assembly room. Mr. O. C. Gregg and Deputy Fruit Inspector Newcomb assisted me in this Institute. Fruit, dairying, crop rotation, and selection were topics discussed at Emmett.

Morning sess	ion	 	 75 present.
Afternoon se	ssion	 	 250 present.
Evening sess			

- advertised, little interest taken. Mr. Newcomb addressed the meeting. I held a get-together meeting with the Commercial Club of Fruitland, 80 present, and planned for a Fruit Institute at that point, March 1 and 2.
- Jan. 31. Payette Institute. Conflicting meetings. Compromise made whereby we had one session, 150 present. Mr. Newcomb and Mr. Gregg, lecturers.
- Feb. 1. Parma Institute. Chicken Show in connection. A great success; two sessions, 175 each session. Mr. Newcomb and Father Gregg, lecturers.
- Feb. 2. Bliss Institute. Poorly advertised, small attendance. Lecturers, Father Gregg and Supt. Welch of Gooding Station, 2 sessions; 50 in attendance each session.
- Feb. 3. Gooding Institute. Poorly advertised. Strife between settlers and company over water. One session held, 50 in attendance. Lecturers, Father Gregg and myself.
 - Feb. 5 to Feb. 24. Given to work of Movable Schools.
 - Feb. 26. Dairy Institute at Wendell, conducted by Prof. A. K. Risser. A general Round Table Conference on dairy cows, how and where to get them. The interest manifested at this Institute brot about plans whereby Prof. Ellington was employed to go East and purchase some 300 choice dairy cows for farmers of Jerome and Wendell districts.
 - Feb. 26. Weiser Institute. This meeting was poorly advertised. Two sessions, 50 present. Lecturers, Prof. Wicks, Prof. Iddings, and myself.
 - Feb. 27. New Meadows Institute. Good interest shown, 70 in attendance. Lecturers, Prof. Iddings and Prof. Wicks.
 - Feb. 28. Council Institute. Two sessions. Attendance 110. Good interest shown. Lecturers, Prof. Iddings, Prof. Wicks, and myself. County Supt. Neale joined us at New Meadows and aided us in all institutes held in Adams County.
 - Feb. 29. Indian Valley Institute. County Supt. Neale drove us from Council to Indian Valley, some 19 or 20 miles, over almost impassable roads. Morning, afternoon, and evening sessions held. At close of afternoon sessions Supt. Neale drove Prof. Iddings and Prof. Wicks back to Council and I gave an evening lecture at Indian Valley; attendance 165.
 - Mar. 1. Cambridge Institute. Poorly advertised. No attendance at forenoon session. Prof. Wicks and myself went on down to Fruitland Fruit Institute. Afternoon nearly 100 came out to hear Prof. Iddings and at their urgent request he held a night session of the Institute.
 - Mar. 1 and 2. Fruitland Institute. Our first session was called in the evening of March 1st with fully 500 present. Speakers, Prof. Wicks, State Supt. Shepherd, and Miss Bales. Saturday forenoon and afternoon sessions were held. Speakers, State Fruit Inspector McPherson, Prof. Wicks, Supt. Ontario City Schools and myself. A pruning demonstration was given in a nearby orchard. Attendance 200 in the forenoon and 300 in the afternoon. The most thoroughly successful fruit institute of the entire season.
 - Mar. 4 and 5. Richfield Institute. Little interest the first day and small attendance. Second day, more in attendance and a greater interest shown. Workers failed to arrive and I held all three sessions that day alone. Second day State Fruit Inspector and

Assistant Engineer Tallman from Mr. Mark's office came to my assistance. In a farmers' round table which we held in the forenoon of the second day a commercial travelling man interested in hogs gave a splendid hog talk. Attendance increased from 25 in the first session to 75 in the last session.

OWYHEE COUNTY TRIP.

- Mar. 6-8. We gave two instittues in Owyhee County March 7 and 8. At Bruneau March 7, we held three sessions with 50 present in forenoon and 150 present at the other sessions. Lecturers, Mr. D. R. Hubbard on Dairy Cows and Hogs, State Fruit Inspector McPherson on Fruit, State Supt. Shepherd on Potato and Sewing Clubs, W. H. Olin on Crop Rotation and Seed Selection. At Grandview, March 8, held two sessions in the new school house. Same corps of lecturers, 100 present.
- Mar. 9. Held a one-session institute on return to Mountainhome. Little interest manifested. 150 present.
- Mar. 11, Monday. Weston Institute. Work at University prevented any assistance from staff of workers and I conducted a three-session institute at this point alone. Great interest shown, attendance good. Forenoon session, 130 present and evening session, 200 present.
- Mar. 12. Dayton Institute. Bad roads and poor advertising prevented a good attendance. One session only held, 20 present.
- Mar. 13. Preston Institute. Falling weather at this point but attendance surprisingly good. A live Farmers' Institute Association here. 50 present in forenoon. No workers from the University with me and I was ably assisted by Prof. Morrison of the Oneida Stake Academy and by President of the Cache Valley Fruit Growers' Association of Logan, Utah. A fine institute. 200 in the afternoon.
- Mar. 14. Oxford Institute. An afternoon and evening session was held again without helpers. Attendance 25 at one and 75 at the other session.
- Mar. 15. Downey Institute. Called Prof. Maughan of State Academy to help me for two days. One session only held here. Prof. Maughan and myself speakers. 60 present.
- Mar. 16. McCammon Institute. But little interest shown. 50 present. Only one session held. Lecturers, Prof. Maughan and myself.
- Mar. 18. Hagerman Institute. Small attendance but much interest shown in fruit, potatoes, and pure seed law. 25 present forenoon session, 75 at afternoon session. State Fruit Inspector McPherson assisted me at this institute. We discussed the three topics named above.
- Mar. 20. Ashton Institute. A furious snowstorm blocked the roads making them well night impassable. Two sessions held in the afternoon, 30 present, evening 23 present. Dr. E. T. Baker assisted me here.
- Mar. 21. St. Anthony Institute. Found I had not reached the farmers thru the secretary of commercial club, Mr. Reed. Roads almost impassable. Afternoon session 50 present, evening session 21 present. Lecturers, County Supt. Miss Wood, Dr. Baker and myself.
- Mar. 22. Rexburg Institute. Found that a church anniversary was in full swing. Compromised on one session with Mormon leaders and

had a rousing meeting, 100 present. Lecturers, Dr. Baker and myself.

Mar. 23, 24, and 25. Paris Institute. This will go down as the one three-day institute of the year and as the best, most enthusiastic Farmers' Institute of the whole season. Lecturers, Dean Carlyle, Prof. A. K. Risser,, E. F. Rinehart, J. S. Welch, State Superintendent Shepherd, Dr. Baker, and myself. Prof. A. J. Knapp, instructor in Agriculture at Fielding Academy, and Principal Morgan joined with the local committee and worked up a splendid attendance. The agricultural students were excused from all classes at academy and attended each of the nine sessions of the Institute. The Live Stock Demonstrations by Dean Carlyle were certainly greatly appreciated. Attendance as recorded by Prof. Knapp was as follows:

Saturday, March 23—
1st session. 225 2nd session. 300 3rd session. 225
Monday, March 25—
1st session 300 2nd session 350 3rd session 400
Tuesday, March 26—
1st session. 400 2nd session. 500 3rd session. 475

Mar. 28. Malad Institute. A conflict in advertised date caused a lessened attendance. Three sessions held, great interest shown. Attendance 200. Lecturers, J. S. Welch, Dr. Baker, Dean Carlyle, and E. F. Rinehart.

This closed the Spring Institute campaign.

SUMMER INSTITUTES

Because of the scarlet fever epidemic in the spring, Midvale did not have an institute in the spring schedule. At the request of the farmers I held a one-session institute there May 9th. It was a busy season, but sixty farmers were out, and we held a general farm round table discussion.

At the request of the Cambridge Commercial Club, held a conference with the farmers at that point Friday, May 10; sixty present.

A series of institutes were scheduled for last week in June in Long Valley. Mr. E. F. Rinehart, Mr. R. B. Coglan, and Prof. E. W. Hamilton accompanied me on this trip.

Our first institute was at Roseberry Tuesday, June 25th. A fine showing of cows, colts, and horses was made for Mr. Rine-

hart to judge. A two-session institute was held. Afternoon session, 200 in attendance; evening session, 350 in attendance.

As a result of this institute, farmers of the valley, under Mr. Coglan's direction, later in the season organized a Timothy Seed Growers' Association at Roseberry, and another one at Crawford.

The meeting advertised at Van Wyck was a failure. No institutes in the future should be scheduled here. The meeting at Thunder City was very poorly attended Saturday, June 29th; twenty-three only present. The one place for the south end of Long Valley for institute meetings is and should be Crawford.

The first week in August we held a series of Summer Institutes in Bonner county, as follows:

- July 31. Priest River. Farmers showed little interest; one session, 25 present.
- Aug. 1. Laclede. Small attendance. Two sessions, 25 present.
- Aug. 3. Copeland. Held in the midst of a furious rainstorm at a Farmers' Union hall. Two sessions, 75 present. Lecturers, Prof. E. J. Iddings, Prof. J. A. Hughes, and myself. The season was backward and the farmers too busy with hay crop to attend. The Copeland meeting was the only successful and satisfactory meeting of the trip.

THE ARCO-SALMON TRIP

The last week in August we held a series of institutes in Blaine, Custer and Lemhi counties. The lecturers were Professor Iddings, State Fruit Inspector McPherson, State Superintendent Shepherd, and myself.

Saturday, August 24th, we held the first institute of the series at Arco. A precinct fair was held in conjunction with the institute, and our staff was busy for several hours placing the ribbons on the live stock, fruits, vegetables, and grain shown.

A deep interest was shown on the part of the district farmers in these meetings at Arco. Forenoon session, 110 present, and afternoon session, 210 present.

Tuesday, August 27th.—Challis institute. Forenoon session, sixty present; afternoon session, 115 present. Nearly every one in town came out to see and hear Professor Iddings on his horse demonstration, which was the great hit of the institute.

Friday, August 30th.—Salmon City institute. Forenoon session; 77 present; afternoon session, 110 present. The

Highest Att

last summer institute held was at Soldier, September 7th. Two sessions: forenoon, twenty-five present; afternoon, seventy-six present. Lecturers, R. B. Coglan and J. S. Welch.

INSTITUTE SUMMARY

During the year we have held an Institute or Movable School in every county in Idaho, save Shoshone, a mineral county.

NUMERICAL SUMMARY.

Total		3675	6529

3675 divided by 50 equals 73.3, the general average attendance per session. 73.3 times 111, the number of sessions, equals 8136, the total attendance, as per method employed by the United States Farmers' Institute Specialist, which rule is now adopted by the American Association of Farmers' Institute Workers.

III. DEMONSTRATION TRAIN WORK

In December, 1911, in cooperation with Oregon Short Line and Professor L. A. Merrill, in charge of Extension Work for Utah, we ran a demonstration train from Salt Lake to Huntington with allied branch lines. A detailed report of this has previously been handed to you.

In January we ran a demonstration train through North Idaho in cooperation with the Northern Pacific Railroad, a report of which has also been handed in to you.

T	Idaho Towns	Number of	Total
Road.	Visited.	Lectures.	Attendance.
O. S. L	51	160	7865
N. P. R. R	27	80	6087

Total		240	13952

The Demonstration Train work is largely inspirational, and the greatest good, in my judgment, is accomplished through "follow-up" Institutes, such as we were able to give with the Northern Pacific Demonstration Train, as per report on same.

I hereby recommend that the time usually taken with Demonstration Train work this coming year be given to Movable Schools work, preparing the way for more effective work on the Demonstration Train work the next succeeding year. When we run the next Demonstration Train it should be a live stock train from start to finish, showing types of live stock for the different sections and demonstrating in a Domestic Science car how the cheaper cuts of meat can be made palatable and desirable for general family use. We can make such a train interesting, instructive, and of very great value to the people

served. I have asked both the Northern Pacific and Oregon Short Line for such a train in the fall of 1913.

IV. SUB-STATION WORK

The matter of a Dry Land Substation had been under consideration for some time before I came to this department work. Mr. M. A. Carleton, in charge of Grain Investigations; Mr. F. D. Farrell, his assistant, yourself, and the writer carefully investigated the different locations offered for station work.

The one at Aberdeen seemed more central for the territory served, the soil over the eighty acres offered for station use was uniform and comparable with a large area of contiguous non-irrigated land, and the improvements promised by the Aberdeen Commercial Club were adequate to our needs, and so this site was determined upon. A lease upon the land for fifteen years was given to the University and an agreement entered into by yourself, representing the State Experiment Station as Director, and Mr. M. A. Carleton, representing the Office of Grain Investigations of United States Department of Agriculture, to establish at Aberdeen a cooperative station which shall have for its primary purpose the testing of nonirrigated crops adapted for the use of the dry farmer of South Idaho, and the working out of such cultivation and rotation practices as shall seem applicable to the work and needs of non-irrigated farms of our state with a rainfall of less than twenty inches per annum.

Mr. L. C. Aicher, of the Caldwell State Demonstration Farm was selected as Superintendent of the new station, and plans were agreed upon for a farm cottage, barn, seed house, and implement shed, which were built by the Commercial Club of Aberdeen under the personal supervision of Superintendent Aicher.

The Aberdeen branch of the Oregon Short Line Railroad to the Aberdeen Station cuts through this farm diagonally from northeast to southwest, leaving approximately twelve to fifteen acres on the west and fifty-two to fifty-four acres upon the east of the right-of-way. The west portion being under ditch. it has been determined wise to use in crop, cultivation, and rotation work as a check upon the same work conducted upon the other block of land without irrigation.

Both blocks of land are being surrounded with a rabbit-proof woven-wire fence, the Oregon Short Line agreeing to place this type of fence on both sides of their right-of-way through the Station farm.

This season some work in grain and potatoes was carried on, while permanent plots were seeded to alfalfa, testing cultivation methods, different rates of seeding, different seed strains, and best methods to be practiced for successful alfalfa seed production. The entire farm was thoroughly plowed and worked up into proper seed bed conditions.

This fall the cultivation and rotation experiments jointly agreed upon are being started. Cooperative work both in seed flax and dry land seed potatoes has been taken up with many farmers on adjoining dry land farms by Mr. Aicher and myself this summer. Desirable results with both are being obtained. The work of this new Station is well under way.

THE CALDWELL STATE FARM

The State Farm at Caldwell I found to have a very spotted soil. It is underlaid with a so-called hardpan varying from three to five and six feet in thickness, and from three feet on the lower levels of the farm to twenty inches below the surface soil at the hillsides. The surface soil has an innumerable number of so-called "slick spots," which are seemingly devoid of all humus and hold an unusual amount of calcium, usually in some carbonate form. When wet, the soil in these slick spots runs together and cements, making crops quite difficult and experimental work in such soil practically an impossibility until the slick spots are overcome. For that reason we decided, first, to get the cultivated land in shape to seed down as soon as possible. and while in grass or alfalfa to neutralize and build up the soil within the spotted areas. This past season we tested seed types of wheat, oats, barley, corn and potatoes on certain areas and now have on the Dry Farm area some thirty-eight acres seeded to the best strain of Turkey Wheat which Mr. Aicher could get in the American Falls district.

It has been impressed upon me that the most important thing for us to do at this state farm is to demonstrate the cheapest and most effective method to neutralize the "slick spots." The Gooding Station has shown the efficacy of manure in this work and some feeding at this station will serve a double purpose: (1) show farmers of this section how they can profitably make use of a large portion of their farm roughage, and (2) give us the manure to build up this farm soil.

If this State Farm is retained it is better adapted for a feeding station of some kind than it is for a crop station. A forest nursery could, to very good advantage, be here maintained. It would cost but little and do a great and lasting service to the farmers of South Central Idaho.

As fast as possible we should get the present cultivated area in alfalfa or grass.

The Caldwell Commercial Club this past season furnished the water for eighty acres of crop land.

Mr. C. B. Hampson, who has been working on this farm for some time, has been acting as foreman since Mr. Aicher was called to Aberdeen.

CLAGSTONE STATION

This station, as you are aware, was primarily intended to aid farmers on the cut-over or logged-off lands of North Idaho in solving their problems of stumping the land, correcting soil acidity, and determining the crops most profitable for these lands.

We now have several areas cleared and in crop, aggregating thirty-four acres. Professor Jones of the Department of Chemistry is cooperating with us on the soil problems by using lime, manure, and other fertilizers and neutralizers upon various crops plats, and is conducting a milling wheat plot test in conjunction with similar work upon the Aberdeen and Gooding Stations.

We are testing various grasses and forage mixtures to determine what ones are most advantageous for farm conditions in this locality; also the winter grains and such other types of crops that would seem to have real value for this region. We seek to maintain all plats upon the acre or half-acre basis. We

now need to have comfortable farm cottage, seed house, adequate barn for farm needs, and some provision made for farm well for stock and domestic use.

This year's crops results have not yet been tabulated, but we find, as would be expected, that lime and manure invigorate crop growth on this soil and counteract the acidity found in most of the logged-off areas. The efficiency of aeration we are also testing.

As soon as proper facilities can be provided for it, we should place a superintendent here and let Mr. Heideman give his entire attention to the stumping of the land for seed bed preparation and the grass work for which he seems to be especially fitted.

We will increase the crop area as rapidly as funds for this work will permit.

GOODING STATION

The work of this Station is to assist farmers of this region in their cultivation, irrigation, and crop rotation problems. Being a cooperative Station, Mr. Don H. Bark of the Office of Irrigation Investigations of the United States Department of Agriculture, directs the irrigation experiments, and on the part of the University I plan the other work of the Station, and Superintendent J. S. Welch directs and executes the plans mutually agreed upon.

Mr. Bark this past year has maintained duty of water experiments upon wheat, oats, barley, potatoes, sugar beets, and alfalfa. On the part of the University, we have demonstrated the efficiency of manure in overcoming the so-called "slick spots," so common in lava ash soils of Snake River Valley, have continued the testing of varieties of potatoes, wheat, oats, and barley by procuring for the test only those that had a good performance record somewhere, have continued the test of Flint versus Dent corn for silage purposes, the seeding of alfalfa at different rates and by different methods of irrigation for young alfalfa on lava ash soils; begun a preliminary test of number of sheep and number of cows per acre which certain pasture grass mixtures will maintain in thrifty condition; while we have taken up the question of green manure on lava ash lands to increase amount of humus. This last month we plowed under

the third crop of alfalfa on acre plots in series "C"—seven acres. Here we will test the result of this work the following season. This year we had an increase plot of choice Turkey Red wheat (irrigated) which was distributed to farmers desiring same at seed prices. We are this fall seeding, in a similar manner, the Winter Barley, that has given the best performance record, on the Station test for seed distribution in small amounts next season.

The vetch tests show one pronounced type best for winter or fall vetch (Vicia villosa) and another one for spring seed (Vicia dasycarpa).

This year we inaugurated Farmers' Day at the Gooding The Commercial Club of the town furnished a free barbecue dinner for the guests of the farm, the Idaho Southern and Oregon Short Line granted excursion rates, and a very satisfactory number of persons, upward of one thousand, availed themselves of the privilege to visit the Station Farm. The Governor on the part of the State, yourself on the part of the University, Mr. C. E. Roberts of the State Grange, and Mr. R. L. Stevenson of the Farmers' Union responded on the part of the farmers. Mr. R. B. Coglan, State Seed Commissioner, Superintendent L. C. Aicher of the Aberdeen Station, Mr. Stephen Ragan, and Professor Fishburn assisted Mr. John Krall and Superintendent Welch in directing the visitors on an inspection trip over the farm. The day was a helpful one to the farmers, and an important one to the Station. We believe this plan should be followed up and a Farmers' Day held at such a time in the crop season as shall be deemed most desirable and helpful.

We now plan to work out in a practical way a desirable rotating crop plan for the section.

SUMMARY OF SUB-STATIONS

Our sub-stations are then established and seeking to work out the following problems for their respective localities:

1. Aberdeen—The moisture conserving methods; cultivation, crop, and rotation methods for dry farming conditions in that section of the state.

- 2. Caldwell—The betterment of an undesirable soil condition, and rendering in uniform tilth a very spotted soil; the distribution of desirable seed adapted to that region.
- 3. Clagstone—The solution in a practical way of soil and crop problems for farmers in the logged-off land areas of North Idaho.
- 4. Gooding—Soil, irrigation, and rotation problems of the irrigation farmer within that region of the state.

We need an increased fund at each Station to adequately serve the purposes for which that Station was established.

V. GENERAL OFFICE AND CORRESPONDENCE WORK

This division of the work has become of growing importance as the year has advanced. Early in the calendar year 1912 it became apparent that to do our work effectively we must have a stenographer for full time instead of the plan of one stenographer for the two offices of Agricultural Extension and United States Irrigation Investigations, to be paid for jointly by both offices. Because of the nature of the work, being state-wide and of state importance, we applied to Mr. O. V. Allen, State Treasurer and Custodian of the State House, for office room within that building. He kindly set apart two committee rooms in the Senate Gallery, third floor of the State House, for our use. One had running water and a waste basin, which was given over to Mr. E. F. Rinehart for his testing work and general office use; the other office housed our supplies and fixtures and gave room for the present stage of the work.

A stenographer on full time was employed, and we were thus able to take care of the growing correspondence of the office. One familiar with the Agricultural work of the University was needed, and by Miss Frye coming from Morrill Hall, we now have one familiar with the work, and one who knows the needs and work of the office. She has taken charge of dating institutes under my direction and keeping me in direct touch with the work when in the field. We have been so busy with the correspondence routine that we have not been able to yet classify the work of the office and file correspondence, bulletins, etc., as they should and will be done as soon as present work permits.

I feel that the office work and correspondence is a very important division of the work, and we want to extend, through this means, the service of the University to as many individual farm

problems as possible, that we may in this way do the "greater good to the greater number."

Respectfully submitted,

W. H. OLIN. Director of Agricultural Extension.

REPORT OF FIELD DAIRYMAN MARCH 25 TO NOVEMBER 15, 1911

The work of this division has consisted mainly in attending institutes and special meetings, judging live stock at the county fairs, personal visits to men specially interested in dairying, cooperative herd testing, giving assistance in securing a better grade of dairy cattle and supervising barn and silo construction work.

Following is given a detailed account of the work:

MEETINGS

- Paris, Idaho, March 26, Farmers' Institute. Malad, Idaho, March 28-9, Farmers' Institute. Nampa, Idaho, April 13, Dairy Meeting. Meridian, Idaho, May 1, Dairy Meeting. Nampa, Idaho, May 4, Dairy Meeting.
- Nampa, Idaho, May 4, Dairy Meeting.
 Roseberry, Idaho, June 25, Farmers' Institute.
 Thunder City, Idaho, June 29, Farmers' Institute.
 Boise, Idaho, July 3, Teachers' Normal.
 Greenleaf, Idaho, August 22, Grange Picnic.
 Mountainhome, Idaho, August 24, Dairy Meeting.
 Reswell, Idaho, November 15, Field Day.

Approximate attendance at all meetings, 2325. A talk on some phase of dairying was made at each of these meetings.

At Malad, Roseberry, and Reswell a judging demonstration was given.

At Meridian an association known as the Victory Dairy Association was organized.

The Nampa meetings were held with the stockholders of the Nampa Cooperative Creamery Association. This company had been organized some time during the winter, and a number of mistakes had been made in the organization. As it was not believed that conditions were right for a cooperative company here, they were strongly advised to postpone further action for a few years, but they decided to go ahead. With them taking the

responsibility, aid was given in planning their building and purchasing the machinery. The building was erected and first-class machinery installed at a total cost of \$3500, this being half the cost of the cooperative creameries built in Idaho by the professional promoters.

The fairs attended were at Albion, Filer, Shoshone, McCammon, Boise and Oakley. At each of these, with the exception of Albion and McCammon, a judging demonstration was given. At Boise a dairy test was conducted for two days. The Holsteins won this contest, with the Red Polls standing second. Nine cows, representing three breeds, were entered. At Oakley daily demonstrations of the use of the Babcock tester were given. This created much interest and samples of milk were brought in from practically every cow in the community.

SILOS

Considerable time has been spent in silo construction work. Owing to the fact that the material for the forms is quite high and there was practically no silage machinery in the country, it was thought best to confine this work to one section for this season. Canyon county was selected, as there seemed to be the greatest interest shown here. Personal visits were made to all the men who had enough cows to warrant the use of a silo, and each was put in touch with other men interested in building. In this way all cooperated in the construction of the silo forms and in the purchase of machinery.

The corn crop was late and rather poor. A heavy frost, September 15th, caught the immature corn and made it imperative that all silos be filled at once. All the farmers having silos were at once communicated with by telephone and the work begun immediately, so that the crop was stored before it was damaged seriously. The corn made from six to fourteen tons to the acre, averaging about ten tons. At the present time it is impossible to give the exact cost of the silos, as the complete data is not yet available.

CONCRETE SILOS

L. S. Dille, Caldwell, 10x30; unskilled labor used; cost approximately \$165.

F. M. Burris, Caldwell, 10x29; work done entirely by skilled labor,

although silo work was new to them; cost approximately \$190.

- B. Whealdon, Payette, 14x31; unskilled labor; cost approximately \$290.
- H. R. Boomer, New Plymouth, 14x33; unskilled labor used; cost approximately \$300.
- A. L. Hulbert, Nampa, 12x37; skilled labor, although silo work was new to them. Approximate cost, \$300.
- F. R. Odle, Nampa, 12x30. Farm labor used. Cash outlay approximately \$160.
- H. C. Watson, Notus, 16x34. Some skilled labor used. Cost approximately \$230.
- A. P. Scritchfield, Payette, 16x34. Farm labor used. Cash outlay approximately \$170.

Adam Blind, New Plymouth, 14x28. Built of a combination of wood and concrete. Structure not approved, but assistance given in order to make it stand as long as possible. Skilled labor used. Approximate cost, \$200.

STAVE SILOS

A. Cornell, Caldwell, 12x28. A home-made silo following our specifications mostly, although not entirely. Approximate cost, \$140.

BARN CONSTRUCTION

Mr. B. Whealdon of Payette was given assistance in building a barn for twenty cows. As he had planned his barn and ordered the material before getting in touch with the University, our exact specifications could not be followed, yet changes were made in the original plan to make the barn sanitary and convenient.

Messrs. A. P. Scritchfield of Payette and Harry Walkins of Mountainhome have been given assistance in remodeling old barns into dairy barns.

Messrs. J. A. Marsh and John Pemberton of Caldwell; H. H. Peters of Murphy; T. H. Reilly of Twin Falls; W. T. Love and Harry Walkins of Mountainhome; H. B. Spencer of Idaho Falls, have asked for and been furnished with barn plans.

Mr. Pemberton, Mr. Marsh, and Mr. Love have decided to build, and assistance will be given in this work.

great the state of the state of

In addition to the above blanks were furnished to L. F. Sheriff of Malad; W. W. Richards of Paris; C. R. Clark of Georgetown; F. M. Roseman of Caldwell; L. L. Young of Princeton; Robert Gray of Post Falls; Curtis Miller of Nez Perce, and A. A. Slauffacher of Buhl.

A great interest is being shown in dairying throughout sections of Southern Idaho, principally in the counties of Canyon and Twin Falls. At Mountainhome, Nampa, Caldwell, and Meridian meetings have been held to consider the advisability of securing dairy cattle. Over 1100 head of dairy cattle, grades and pure breeds, have been shipped into Canyon county since May 1st.

From advance notices and requests an unusually large amount of silo and barn construction work will be done next year.

Respectfully submitted,

E. F. RINEHART, Field Dairyman, University of Idaho.

REPORT OF THE COLLEGE OF ENGINEERING

To the Honorable Board of Regents, University of Idaho.

Gentlemen:

During the past biennium the Engineering College has made progress in organization, in equipment, in improving the work of its regular courses, and in giving specialized, practical instruction to those directly needing it, by short courses for road overseers, prospectors, and machinist apprentices.

In common with practically all engineering colleges throughout

the country there has been a reduction in enrollment of engineering students, due to the prevailing decrease in engineering activity. Experience has shown that such a decrease is a normal response to the law of supply and demand, and disappears with the return of prosperous times.

The great need of the College is for a new Engineering Building. For several years the necessity for a better provision for Electrical and Mechanical Engineering has been increasingly urgent. In the cramped quarters of these two departments the machinery is so crowded on the floors that it is difficult to move about without stumbling over some piece of apparatus. The old School of Mines Building, in which these departments are housed, was not designed for its present use, and the vibration caused by the machines interferes seriously with the careful measurements required in some parts of the work.

The areas now provided for the two departments for all purposes amount to 3600 square feet of floor surface. In the new building there should be a provision of 5000 square feet for the laboratories, recitation room, and various smaller rooms of the Department of Electrical Engineering. The Department of Mechanical Engineering should have 4070 square feet of floor area for steam laboratory, fuel testing laboratory, and machine shop; 3925 square feet for wood-working shop, general carpenter shop, wood storage, and demonstration room; 3200 square feet for forge shop and foundry; and 960 square feet for office, and recitation rooms. For the hydraulics laboratory and the material-testing laboratories of the Department of Civil Engineering 3000 square feet should be allowed. The requirements sum up to 20,155 square feet of floor area.

The removal of the two Departments of Electrical and Mechanical Engineering from their present quarters will give place to the necessary expansion of the Chemistry Department, which is now crowded almost to the limit of possible endurance.

In constructing the first permanent building for the Engineering College a long look ahead should be taken. It should be located where there is abundant room for future requirements for storage, yards and additional buildings as they shall be required. This location should be adjacent to the site of the permanent central heating plant. For this last a spur railroad track to

deliver coal directly from cars into the bunkers is a necessity for economical heating of the whole University. Such a railroad will be a great advantage to the Engineering College in handling heavy materials.

The building should lend itself to future change and growth. For this reason it seems wise to build it as a unit of a future group of buildings, with permanent walls and roof, but adaptable to changed requirements by inexpensive modifications of internal arrangements.

For such a building the sum of seventy-five thousand dollars would be required. If the needs of the University make it impossible to obtain this sum, at least an appropriation of five thousand dollars should be asked for to secure the necessary land.

Respectfully submitted,
C. N. LITTLE,
Dean of the College of Engineering.
Moscow, December 3, 1912,

REPORT OF THE COLLEGE OF LAW

To the Honorable Board of Regents of the University of Idaho:

I beg to submit for your consideration the biennial report of the progress, condition and needs of the College of Law of the University of Idaho, with my recommendations thereon.

An account of the expenditures of this department since the last biennial report will be included in the detailed report of the Bursar of the University, to which I respectfully refer you for an itemized statement of the same.

We are now in the fourth year of the history of this College. The records of the school show a steady and reasonable growth during the entire period. This in my opinion justifies the expectation of its continuance. There seems to be no ground to question the statement that the College of Law contains its full proportion of the students of the University, as compared with other schools in like situation.

As I had the honor of being a member of your Board at the time of the installation of the College of Law, and was detailed for service on the committee which prepared its course of study and outlined the work required for graduation in Law, I am speaking with full knowledge of the facts when I say that it was the intention of your Board to provide for thorough and complete instruction, and to make the curriculum as strong as that offered in the leading Colleges of Law. This course has been strictly adhered to. The work is not merely placed before the students, but they are required to do it satisfactorily, as an indispensable condition precedent to our recommendation for graduation.

The result has not been disappointing. In June our first senior class of nine men graduated and received their diplomas. All nine have been admitted to the bar of the Supreme Court of this state, and on the occasion of the admission of this class, in open court at Lewiston, the Chief Justice complimented them upon their thorough and satisfactory preparation, saying further that, on the whole, they had borne a better examination than graduates of eastern colleges who had applied to that Court for admission. Already members of this first class are prominent in public and professional-life in the state. One is a member of the Legislature from Latah county; one is the Prosecuting Attorney of Washington county, and others are engaged in practice with flattering prospects of success.

I do not hesitate to say that facts fully justify the statement that the College of Law is no longer an experiment, but is a successful department of this institution and may appeal with confidence to the Legislature for generous provisions for its growth and maintenance.

It is to be presumed that the Legislature fully considered all questions of expediency when it authorized, by an appropriation in 1909, the establishment of the College of Law; and the experiment having proven successful, it is not to be supposed that a change in the policy of the state in this behalf is now to be anticipated.

It is also worthy of mention that the College of Law has succeeded in recommending itself to the bar of the state as a professional school worthy of their confidence and patronage, as is shown both by encouraging words, which have come to us directly from prominent members of the bar, and further by the good representation of their sons in our classes.

Heretofore, the work of regular instructors has been supplemented to some extent by the employment of members of the Moscow bar. The Practice course, given by Hon. Frank L. Moore, is worthy of special mention and commendation. The course in Conveyancing, by Mr. H. R. Smith, has been very beneficial. We have also enjoyed the advantage of lectures by the Hon. James F. Ailshie, of our Supreme Court, and by the Hon. Frank S. Dietrich, United States District Judge in Idaho.

It is not with any idea of criticising or disparaging the work under this arrangement, that I say that it is the tendency and nearly universal history of law schools to develop an organization where the instruction is all or practically all given by regularly employed instructors, who are members of the faculty of the institution. The reasons for this are not far to seek, but space will not permit me to go into them at length beyond a suggestion that the time of a lawyer, actively engaged in practice, will not permit regular and satisfactory work of preparation and instruction in a law school. We have now reached the time when we need another regular instructor, and I recommend provision for his employment.

LAW LIBRARY

The library of an institution of learning always demands the expenditure of considerable money for its installation and a continuous outlay for maintenance and development.

The College of Law has a small library. The fact that we have been able to accomplish so much with our limited number of books is due to their exceedingly careful selection for which we are indebted to Hon. John F. MacLane, under whose wise leadership the College was installed. The question now is, whether the state will require us to enlarge our library by small purchases from time to time, or whether by the investment of the necessary capital the library may be placed at once upon a basis where it will compare favorably with the law libraries of other similar institutions in the country.

The latter would be the best policy, both for the efficiency of the School, and ultimately for the finances of the institution, and would accomplish the highly desirable result of giving us the working equipment of a first-class College of Law. Having been connected with the public affairs of the state at large and of this and other of its public institutions for a number of years, I am very familiar with the financial difficulties which have impeded the growth and development of the state; and while I recommend the course above indicated, I do so with full knowledge that the recommendation must be subjected to the scrutiny of those who will have the task of providing for the growth and consequent necessities of all the institutions of the state and all departments of the state government.

The sum needed for the salaries of instructors for the next two years should cover the salary of the one additional instructor already recommended.

Respectfully submitted,
O. E. McCUTCHEON,
Dean of the College of Law.

HOME ECONOMICS BUILDING

To the Board of Regents, University of Idaho. Gentlemen:

I wish to submit the following report for the year 1912-1913, and recommendations for the year 1913-1914.

Since the organization of the Department of Domestic Science, later the School of Home Economics, it has been more or less migratory, being moved from one building to another as other departments have needed additional rooms. At present the work is so scattered that it is impossible to give it the close supervision which the new organization should have.

The enrollment for the present year is 150. This includes candidates for the degree of B. S. (H. Ec.), candidates for the degree of B. S. and the degree of B. A., also special students and the Home Science Course of the School of Agriculture. There has been a substantial increase in the enrollment of the freshman class in Home Economics. There are four instructors, Miss Sweet and Miss Schermerhorn giving full time, Miss Shearer half time, and Miss Hoover dividing her time between her departmental duties and extension work.

EXPENSES, 1912 - 13

Salaries.	
Jessie M. Hoover\$	2,000.00
Margaret Sweet	1,500.00
Grace Schermerhorn	1,400.00
Virginia Shearer	600.00
Janitor	80.00
Maintenance	1,000.00
Total	6.580.00

For the year 1913-1914 I wish to recommend that \$7000.00 be set aside for this department. This will allow for a normal increase in salaries and also includes one scholarship of \$125.00. For reasons set forth below an appropriation for a Home Economics Building, a model dwelling house, and equipment for both is requested as follows:

Home Economics Building \$9 Model Dwelling House. Equipment \$2	5,000.00
Total\$12	25,000.00

The Home Economics Building is to include cooking laboratories, laboratories for the study of foods, small dining rooms and kitchens for practical work for family groups, a reception room for social development, store rooms, locker rooms, laundry research laboratory, sewing rooms, class rooms, large lecture room for public demonstrations and class demonstrations, banquet hall with kitchen, home nursing room with bath, lavatories, offices etc. It is the purpose of the model dwelling house to give instruction in the management of the household as a family unit, the laboratories give the individual unit, while the banquet hall furnishes an opportunity for catering and work with large numbers of people. This building should be fireproof. The expense for plumbing, wiring and equipping is rather above the normal because of the large amount of individual equipment.

REASONS FOR MAKING PROVISION FOR THE SCHOOL OF HOME ECONOMICS

The Domestic Science laboratory occupies the recreation hall of the girls' dormitory, and connected with this laboratory is a small kitchen 12 by 12 feet, in which the range, sink, etc., are placed. This kitchen has but one window, which opens on a small court, thus making good ventilation impossible. The

room is so dark that it is necessary to use artificial light. There are no lavatories provided for this portion of the school. The laboratory is equipped for twenty, but it is almost impossible to have this number in the class in cooking because we have only one oven of family size. Not only is this room a cooking laboratory, but it is the sole recitation room. In some classes fifty students recite at one time. The only instruction which can be given in serving is arranged for in this room by the use of portable screens. Here also we have the offices for two instructors. That such facilities are entirely inadequate for efficient work can not be questioned.

At the beginning of this year the Domestic Art classes were moved from Morrill Hall to the physics laboratories and the Department of Romance Languages in the Administration Building, but the physics laboratories were needed for additional classes by the Physics Department. The Domestic Art classes migrated again. These classes now meet in two lecture rooms equipped for teaching languages, and also in an unfinished room in the new wing of the Administration Building. This last room is highly satisfactory. For the classes held in the other two rooms the sewing is carried back and forth each recitation.

So great has been the need for this education for women to do women's work, as opposed to man's work, that it is not only becoming an important phase of education in the United States, but it is even more advanced across the water. Of the European countries offering instruction in Home Economics are Great Britain, Ireland, Germany, Belgium, Finland, Denmark, Norway, Russia, Sweden, Holland, Austria, France, Italy, Hungary, Switzerland, Spain, Portugal, Greece, and Roumania.

A German motto says that "Whatever you would have appear in the nation you must teach in the schools." The nation simply represents an aggregation of homes; its welfare is merely the reflected welfare of the individual homes. "We discard the notion that education is a necessity for man but an ornament for woman. If ignorance is a disaster in places of business where the income is won, it is equally so in the places of living where the income is expended. If science can aid agriculture and mechanic arts to use more successfully Nature's forces, and to increase the amount of value of their products, it can equally aid

the housekeeper in the finer and more complicated use of these forces and agencies in the home, where the raw products are to be transformed into the sweet and wholesome food by a chemistry finer than that of the soils, and the products of a hundred manufacturies are to be put to their final uses for the health and happiness of life."

Practically all the state universities and colleges of the west have these departments, and most of them have regularly equipped buildings for instruction. Shall we neglect our opportunities and force the daughters of our state to seek an education elsewhere? Efficiency is the watchword of all our present-day education, and for the vast majority of women efficiency in the work of life means power to successfully manage her home. course of study not only includes the study of food, shelter and clothing in its practical, chemical, biological, economical, and aesthetic aspects, but it also includes a study of the so-called cultural subjects, as languages, history, music, and art. The course is of four years' length. Going on the principle that a little learning is a dangerous thing, every effort is made to avoid superficial work. Since the principal part of the money expended is for the home, it is the thought of the Department that the conservation of the nation's wealth is largely dependent upon the conservation of the family wealth. Attached hereto will be found a suggestive plan for the proposed Home Economics Building.

Respectfully submitted, JESSIE M. HOOVER.

THE COEUR D'ALENE LAND

In connection with the opening of the Coeur d'Alene Indian Reservation an Act was passed by Congress allowing the Regents of the University to select 640 acres of land for use in connection with the work of the institution, which land was to be sold to the state for its use, and was to be appraised by the Secretary of the Interior for the purpose of making this sale, at not less than \$2.50 per acre. The sum of \$3000.00 was included in the defeated bonding measure for the purchase of this land. In due course the Regents visited the Reservation and selected the following lands to fill said grant, part being water frontage on the lake, and the balance timber and farm land lying northeast of Plummer.

Description of Land—Lots 3, 4, and 5, and NE½SW¼, Section 25, Township 48, Range No. 5, W.; N½NE¼SW¼, W½SE¼, Section 15, Township 47, Range 4 West—606.4 acres.

This land was held for the University and its purchase is still pending. No word being received from the Government regarding the appraisement for some time, the Regents opened correspondence with the Secretary of the Interior, both direct and through one of the state's representatives in Congress. The amount of the state's appropriation was stated and the object of the grant. The reply came though the local land office at Coeur d'Alene to the effect that three appraisements of the land and timber selected had been made at the instance of the Secretary of the Interior. The first appraisement, made by the people who appraise the entire Reservation, amounted to \$2,209.20. For some reason this did not seem enough to satisfy the department, and another appraisement was ordered. The value placed on the land by this second appraisement was \$8,933.70. This discrepancy between these two valuations was so great that a third appraisement was undertaken, which resulted in the value of the land and timber being placed at \$10,235.55. This latter valuation seems to be the one selected by the Secretary of the Interior as his arbitrary valuation to the state for this land, and thus the matter stands. The Regents recommend an appropriation in the amount of the last appraisement.
